# UNEP Shonan Guidance Principles put into practice

The goal of finding, evaluating and generating consistent LCA Datasets

- 1 Motivation, the Shonan Guidance Workshop**
- 2 UNEP/SETAC project: Shonan Database Conformance**
- 3 An overview over Shonan Guidance Principles Conformance Criteria**
- 4 What has been achieved? What's next?**

# 1 Motivation

# The Shonan Guidance Workshop

## The Shonan Guidance Workshop

About 50 recognised LCA experts came together in Shonan, Japan, for about one week in early 2011 in a SETAC “Pellston” workshop, to seek agreement on how to build and maintain LCA databases.

Results are summarised in a 160 page document.

**Content:** Database management, Unit Process, Aggregated Process, Data Documentation and Management, Review, Cooperation, ...

# The Shonan Guidance Workshop

## Motivation

Many different LCA databases exist, more are emerging;

Databases are created and maintained with different concepts, following different principles

→ datasets in databases “do not fit together”; this is not optimal and should be changed

→ Is there a common bases on how to create, maintain LCA databases; is there an identifiable good practice?

# The Shonan Guidance Workshop

<http://www.unep.org/pdf/Global-Guidance-Principles-for-LCA.pdf>

# The Shonan Guidance Workshop

## Application

### Ongoing:

GGP (= Global Guidance Principles) trainings (Chile, China, [...], India – Sept 28) to explain and train the ideas and concepts developed.

### New:

Develop and apply criteria for “GGP conformance” for databases

→ UNEP/SETAC project (GreenDelta, Uni Bordeaux)

## 2 UNEP/SETAC project: Shonan Database Conformance

# Shonan Database Conformance Project

## Several tasks; including:

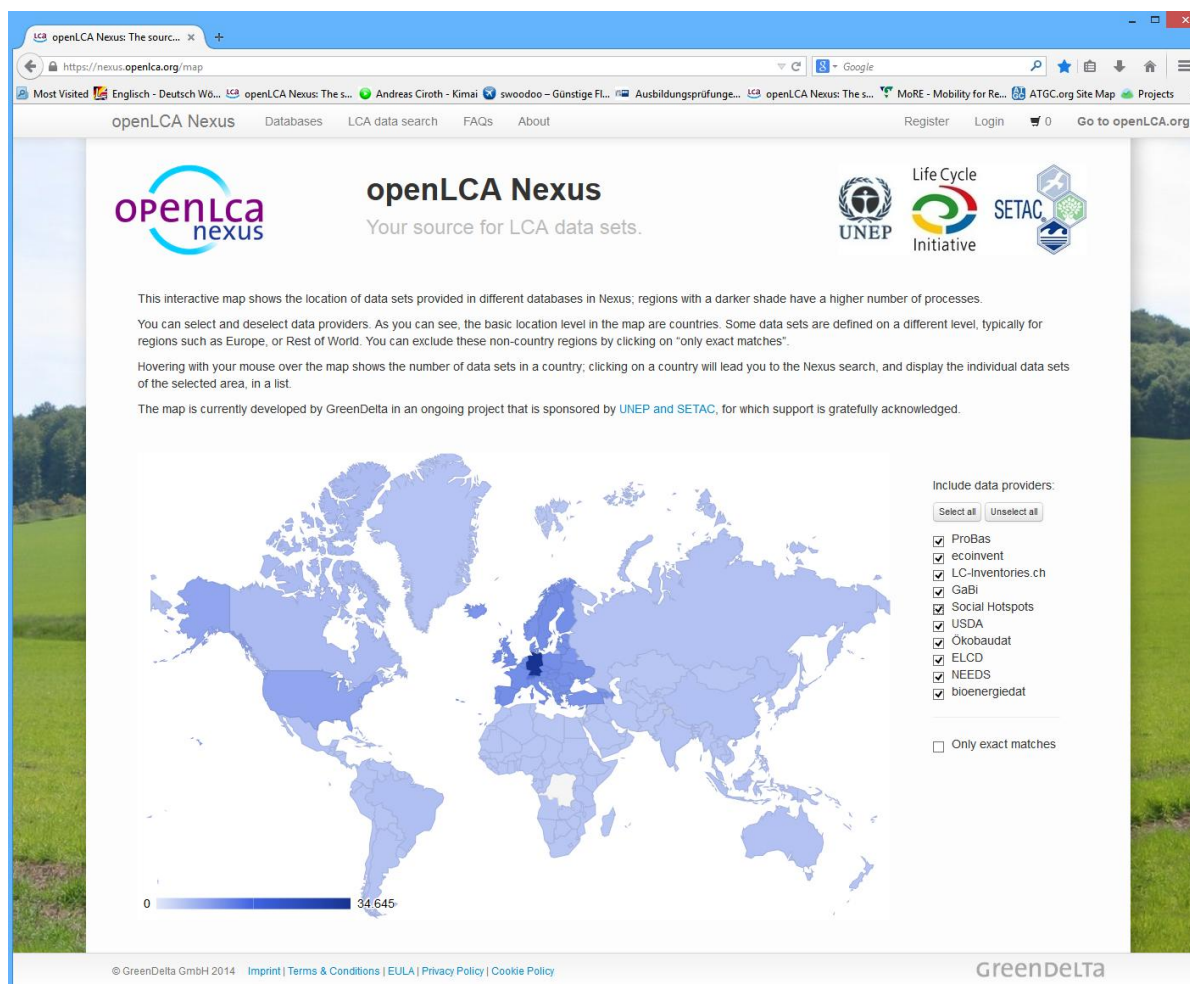

- Creating an interactive map to visualise databases worldwide, with properties
- Development of conformance criteria
- Applying the criteria to existing databases

## Other parts:

- Extending and strengthening a network of existing databases

# Shonan Database Conformance Project

## interactive map to visualise databases worldwide

<https://nexus.openlca.org/map>

# Shonan Database Conformance Project

## Development of conformance criteria

### Main aspect:

“extract” and coordinate criteria from the Shonan Guidance Principles document that can be applied for databases and possibly also for datasets in databases;

→ Condense the information; make it visible (e.g., for datasets available in a country, on a map)

# Shonan Database Conformance Project

## Applying the conformance criteria

Application of the criteria in a coordinated manner;

not: experts assess a database which then scores good or not so good;

rather: database managers and operators perform the assessment, in a transparent manner; the assessment result is cross-checked

### 3 An overview over Shonan Guidance Principles Conformance Criteria

# Shonan Database Criteria

Criteria / desirable features mentioned in the Shonan Report

# Shonan Database Criteria

Criteria / desirable features mentioned in the Shonan Report

Scope not clear (database / dataset); only mentioned in the introduction; no distinction between nice to have / must criteria

# Shonan Database Criteria

## Draft Proposal: Criteria for the criteria

The criteria need to be “3c”:

- Comprehensive (capture spirit and content of Shonan Guidance Text as much as possible)
- Clear (easy to understand, as short as possible, no double-counting and overlaps)
- Concrete (easy to measure and process)

# Shonan Database Criteria

## Draft Proposal: Principal structure

Criteria topic \ scope	A Database	B Unit Process Dataset	C Aggregated Process Dataset
1 Interoperability and Access	A1	B1	C1
2 Content & Content Quality	A2	B2	C2
3 Management	A3	B3	C3

# Shonan Database Criteria

## Draft Proposal: Criteria scores

Possible criteria values / scores:

- Yes/no
- Ordinal (i.e.: low, middle, high or similar, evaluated in points from 1..5, 1 very bad, 3 medium 5 very good)

# Shonan Database Criteria

## Draft Proposal: Criteria scores

### Criteria values / scores relevance

- Most criteria are “evaluative”: a database needs to score above a threshold to be GGP conform
- Some criteria are “informative”: the score does not influence the GGP conformance; they do not have a threshold

# Shonan Database Criteria, draft

scope	criterion	Shonan conformance threshold	unit	unit type
data set, unit process	data set goal and scope description available	yes	yes/no	Boolean
	sufficient data set documentation	4	1..5	ordinal
	data set quality assurance performed	4	1..5	ordinal
	uncertainties described	4	1..5	ordinal
	data set structure ISO compliant	yes	yes/no	Boolean
	product production volumes available		yes/no	Boolean
	technology level available		yes/no	Boolean
	process geolocation available		1..5	ordinal
	time reference available	yes	yes/no	ordinal
aggregated data set	data set goal and scope description available	yes	yes/no	Boolean
	sufficient data set documentation	4	1..5	ordinal
	aggregated data set quality assurance performed	4	1..5	ordinal
	uncertainties described	4	1..5	ordinal
	data set structure ISO compliant	yes	yes/no	Boolean
	product production volumes available		yes/no	Boolean
	technology level available		yes/no	Boolean
	process geolocation available		1..5	ordinal
	time reference available	yes	yes/no	ordinal
database	harmonised taxonomy	4	1..5	ordinal
	supported ISO 14048 compliant LCA data formats		1..5	ordinal
	database protocol available	yes	yes/no	Boolean
	data set inclusion policy available		yes/no	Boolean
	database goal and scope available		yes/no	Boolean
	LCIA method support		1..5	ordinal
	share of unit processes		1..5	ordinal

## Shonan Database Criteria, draft

<b>scope</b>	<b>data set, unit process</b>
<b>critierion</b>	<b>process geolocation available</b>
scores	meaning: geolocation available
1 poor	not available
2 medium-poor	free text
3 medium	country code following ISO 3166-1 alpha-2 or ISO 3166-1 alpha-3
4 good	longitude latitude
5 very good	KML or GML Geocode
threshold	no
type of indicator	informative

## 4 What has been achieved and what's next

## Shonan Guidance Principles Criteria - What has been achieved and what's next

Draft criteria are available, in-project

These criteria help to make the Shonan Global Guidance Principles more operational so that they can be applied on databases and datasets globally

This is one big step towards more interoperational databases

## Shonan Guidance Principles Criteria - What has been achieved and what's next

Draft criteria are available, in-project

→ Upcoming: Coordination & review

→ Upcoming: Cooperation with database providers for completing the coordinated criteria

→ Upcoming: Publishing the criteria for databases, e.g. on openLCA nexus, where they can be used as filters

# Shonan Guidance Principles Criteria - What has been achieved and what's next

What's next-next: Possibly and hopefully, further increased interoperability of LCA databases.
