Brussels, SETAC Europe 2017, 10/05/2017

PSILCA database – Agenda

1. Background and motivation
2. Objectives and approach
3. Methods
4. Results
5. Conclusion

1 Background and motivation

Background and Motivation

“Ensure access to affordable, reliable, *sustainable* and modern energy for all”

(Goal 7 of the UN Sustainable Development Goals (SDG) 2016)

- Sustainable energy “transforms **lives, economies and the planet**”

→ Covers **three dimensions** of sustainability

- On EU level: research on **life-cycle approach** for evaluating the sustainability performance of energy technologies

Background and Motivation

Challenges:

- Only a few case studies for LCSA exist so far, different approaches
- No agreed method or standards– how to combine life cycle tools?
 - Only some LC stages were considered
- Because **high amounts of data** are required
- So far no comprehensive **database** allowing efficient calculation of environmental, social and economic impacts of product life cycles simultaneously

2 Objectives and approach

Objectives and approach

- **Aim:** contribute to research of Life Cycle Sustainability Assessment (LCSA) by providing a tool
- Develop **database** containing **environmental and social** inventory information and **costs** for different product life cycles
- Test database's usability and reliability for LCSA in a case study

3 Methods

Methods: Development of database

- Develop **add-on** containing **social inventory information for ecoinvent v.3.3**
- Ecological inventory data and costs are based on ecoinvent v.3.3
- Social inventory data based on PSILCA

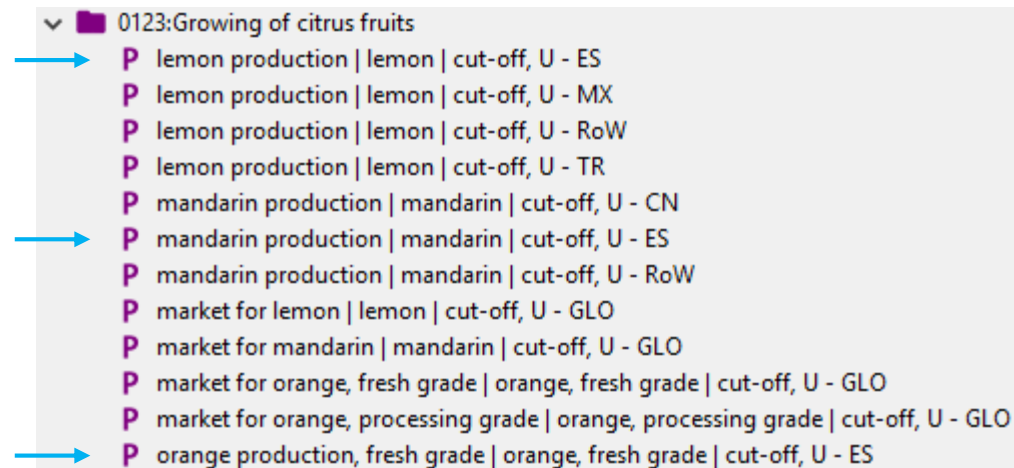

Database: Mapping

- Assigning of risk-assessed indicators from PSILCA *country-specific-sectors* to ecoinvent *categories*

PSILCA “Spain: Products of agriculture”

ecoinvent “Spain: Growing of citrus fruits”

Screenshot from openLCA

- Exception:** market processes and activities for administration and database modelling

Database: Mapping

- Ecoinvent processes of **trans-national (or global) regions** get an **average** of same/similar sectors of all related countries in PSILCA

- Ecoinvent processes of **“Rest-of-World” regions** get an **average** of similar/same sectors of all countries in PSILCA not covered individually for these activities

Database: Activity variable

- Worker hours
- Calculated out of **working time per USD** sector output (from PSILCA) multiplied by **cost** ofecoinvent product
- Average of PSILCA working times assumed for global and regional processes

▼ Outputs

Flow	Category	Amount	Unit	Costs/Revenues
F _o barley grain, feed, organic	011:Growing of non-perennial crops/0111:Gro...	1.00000	kg	0.15900 EUR
F _o Children in employment, total; no risk	Workers/Child labour	0.00185	h

F _o Minimum wage, per month; very high risk	Workers/Fair Salary	0.00185	h	
F _o Presence of indigenous population; no risk	Local Community/Respect of indigenous rights	0.00185	h	
F _o Rate of fatal accidents at workplace; low risk	Workers/Health and Safety (Workers)	0.00185	h	
F _o Sector average wage, per month; very low risk	Workers/Fair Salary	0.00185	h	
F _o Water	Emission to air/unspecified	0.05040	kg	

Screenshot from openLCA

Database: Activity variable

- For ecoinvent activities without costs, parameters were defined

▼ Outputs

Flow	Category	Amount	Unit
☛ Sulfur dioxide	Emission to air/high population density	0.00088	kg
☛ Calcium	Emission to air/high population density	2.37770E-6	kg
☛ NMVOC, non-methane volatile organic compounds, unspecifie...	Emission to air/high population density	2.28130E-6	kg
☛ Molybdenum	Emission to water/ground water, long-term	1.11560E-7	kg
☛ Copper, ion	Emission to water/surface water	9.71220E-6	kg
☛ Chromium	Emission to soil/agricultural	4.30130E-6	kg
☛ Zinc, ion	Emission to water/surface water	3.38050E-5	kg
☛ Lead	Emission to water/surface water	9.48660E-7	kg
☛ Cyanide	Emission to air/high population density	5.99520E-7	kg
☛ Rate of fatal accidents at workplace; medium risk	Workers/Health and Safety (Workers)	1*WH_m3	h
☛ Presence of indigenous population; no risk	Local Community/Respect of indigenous rights	1*WH_m3	h
☛ Human rights issues faced by indigenous people; not applicable	Local Community/Respect of indigenous rights	1*WH_m3	h
☛ Minimum wage, per month; very high risk	Workers/Fair Salary	1*WH_m3	h
☛ Living wage, per month; high risk	Workers/Fair Salary	1*WH_m3	h
☛ Sector average wage, per month; very low risk	Workers/Fair Salary	1*WH_m3	h
☛ Children in employment, total; no risk	Workers/Child labour	1*WH_m3	h

Screenshot from openLCA

Database: Data quality

- Data quality assessment is basically transferred from PSILCA original data
- regarding **geographical and technical conformance assessment**, mapping and data attribution procedures were taken into consideration

▼ Forced Labour						
👤 Goods produced by forced labour		No data	5.19122E-4			
👤 Frequency of forced labour	1.5 [%]	Very low risk	5.19122E-4	(2;4;3;3;2)		📖 ILO 2012: Forced Labour
👤 Trafficking in persons	1 [Tier]	Very low risk	5.19122E-4	(2;1;1;1;4)		📖 U.S. Department of State 2014: Trafficking in Persons
▼ Fair Salary						
👤 Living wage, per month	883.913486 [USD]	High risk	5.19122E-4	(2;2;4;2;2)	Mean over differe...	📖 WageIndicator 2014: Living wage
👤 Minimum wage, per month	1400 [USD]	Very low risk	5.19122E-4	(2;3;1;1;2)	Data scope: count...	📖 WageIndicator 2014: Minimum wage
👤 Sector average wage, per month	6759.4144 [USD]	Very low risk	5.19122E-4	(2;2;2;1;2)	Risk level referrin...	📖 ILOstat 2014

Screenshot from openLCA

Application: Case study

- LCSA of electricity production with photovoltaic panels
 1. Produce 1kWh electricity, low voltage with solar energy in Germany (DE), India (IN) and Mexico (MX)
 2. To compare: produce electricity with 1 photovoltaic panel in DE, IN, MX

“electricity production, photovoltaic, 3kWp slanted-roof installation, multi-Si, panel, mounted | electricity, low voltage”

- Calculate three dimensions of LCSA
- From cradle-to-gate

Application: Impact assessment

- ReCiPe 2008, midpoint (H)
- Rudimentary method for social impacts
- Value added approach by Moreau and Weidema (2015)

Impact assessment method: Social Impacts Weighting method

▼ Impact factors

Impact category Gender wage gap

Flow	Category	Flow property	Factor	Unit	Uncertainty
Gender wage gap; high risk	Workers/Discrimination	Duration	10.0	GW med risk hours/h	none
Gender wage gap; low risk	Workers/Discrimination	Duration	0.1	GW med risk hours/h	none
Gender wage gap; medium risk	Workers/Discrimination	Duration	1.0	GW med risk hours/h	none
Gender wage gap; no data	Workers/Discrimination	Duration	0.1	GW med risk hours/h	none
Gender wage gap; no risk	Workers/Discrimination	Duration	0.0	GW med risk hours/h	none
Gender wage gap; very high risk	Workers/Discrimination	Duration	100.0	GW med risk hours/h	none
Gender wage gap; very low risk	Workers/Discrimination	Duration	0.01	GW med risk hours/h	none

4 Results

Soca database

- S-LCA add-on for ecoinvent v3.3
- Complements environmental and cost data by social risk information:

Workers, Local communities, Value chain actors, Society

17 sub-categories

53 indicators

- “Social aspects”: raw values, data quality, sources...

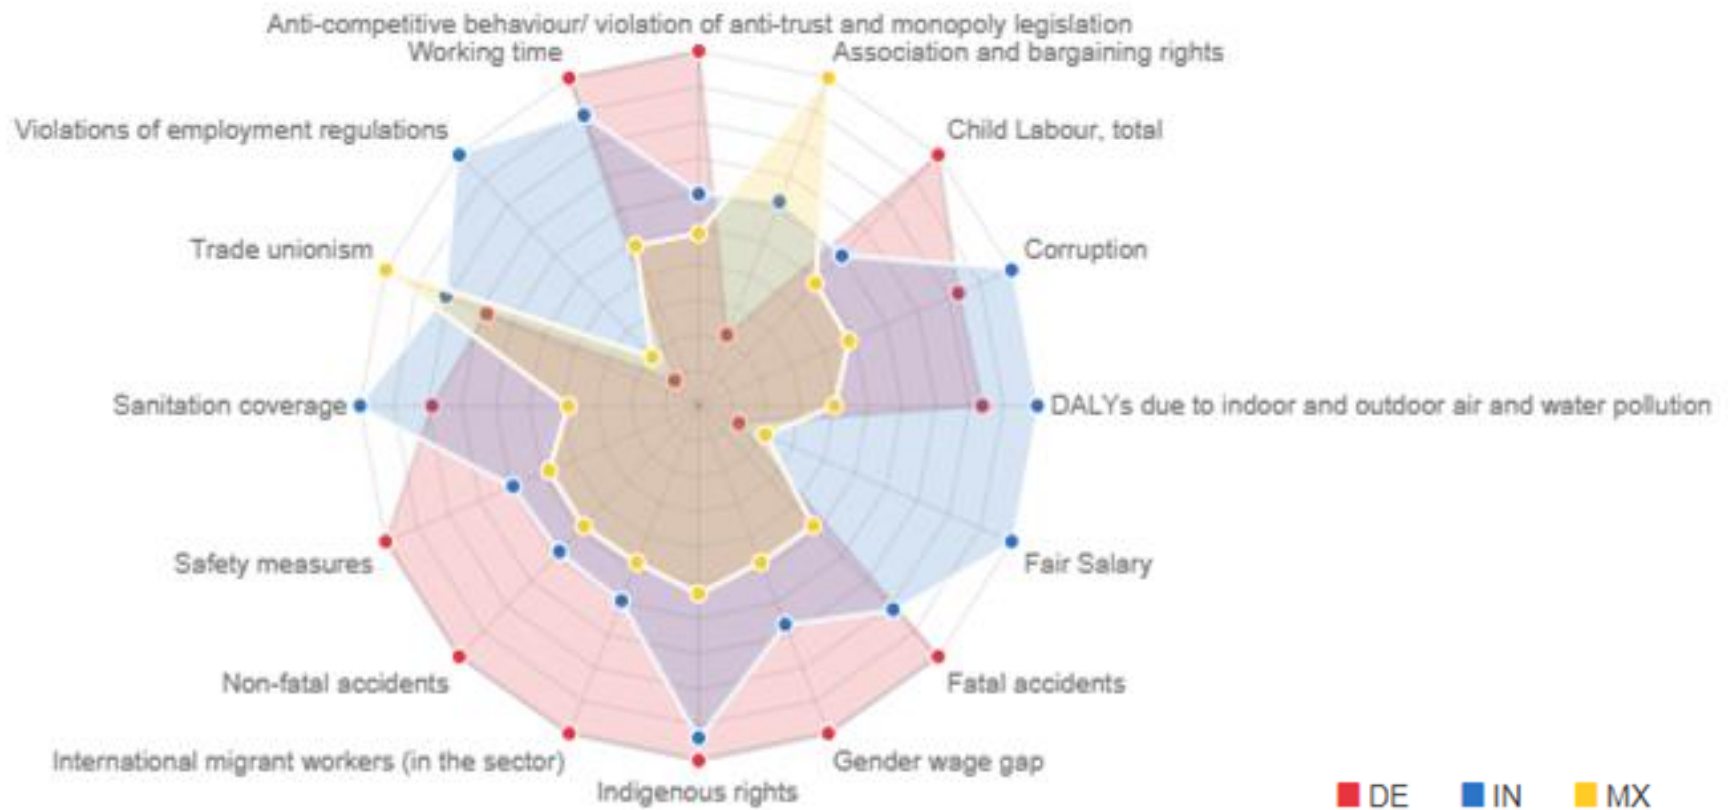

Case study:

Relative environmental impact comparison, 1 kWh electricity

Case study:

Relative social impact comparison, 1 kWh electricity

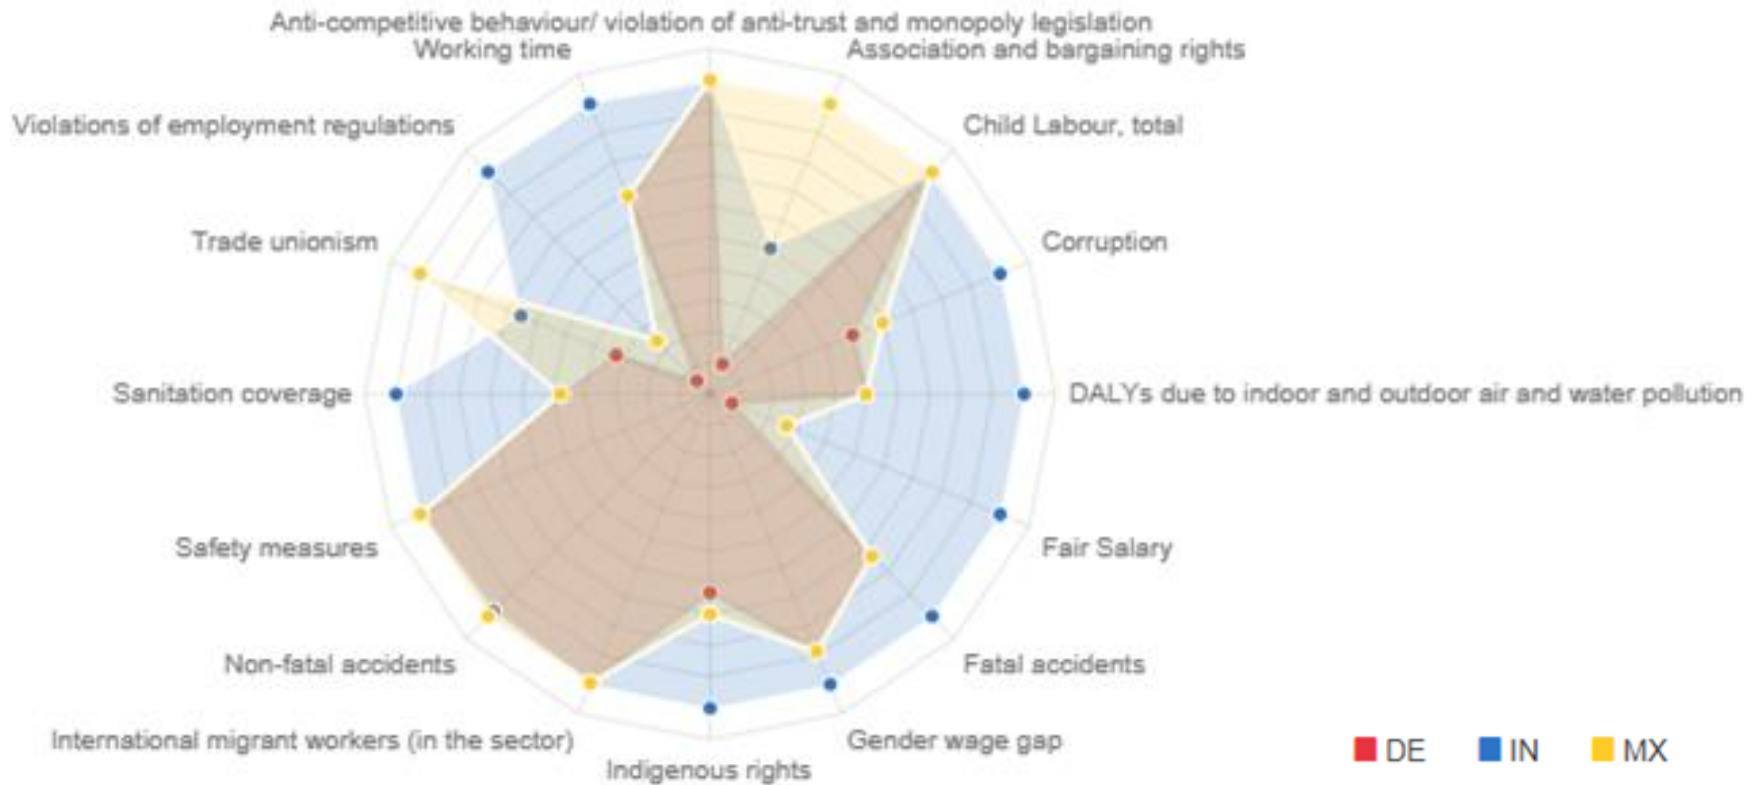

Case study: LCC, 1 kWh electricity

- Total added value = **0.12 USD** for all options
- Due to global average prices for most of the activities

Case study:

Relative social impact comparison, 1 photovoltaic panel

- Environmental impacts are the same for all scenarios

Case study: Contributions, S-LCA, DE (1 kWh)

Direct process contributions to social impact categories

- RoW-photovoltaic slanted-roof installation, 3kWp, multi-Si, panel, mounted, on roof | photovoltaic slanted-roof installation, 3kWp, multi-Si, panel, mounted, on roof | cut-off, U
- RoW-photovoltaic panel production, multi-Si wafer | photovoltaic panel, multi-Si wafer | cut-off, U
- RER-photovoltaic panel production, multi-Si wafer | photovoltaic panel, multi-Si wafer | cut-off, U
- RoW-photovoltaic cell production, multi-Si wafer | photovoltaic cell, multi-Si wafer | cut-off, U
- RoW-multi-Si wafer production | multi-Si wafer | cut-off, U
- DE-electricity production, photovoltaic, 3kWp slanted-roof installation, multi-Si, panel, mounted | electricity, low voltage | cut-off, U
- RoW-flat glass production, uncoated | flat glass, uncoated | cut-off, U
- Others

Case study: Contributions, LCA DE (1 kWh)

Direct process contributions to environmental impact categories

- GLO-treatment of sulfidic tailing, off-site | sulfidic tailing, off-site | cut-off, U
- GLO-treatment of spoil from lignite mining, in surface landfill | spoil from lignite mining | cut-off, U
- GLO-treatment of spoil from hard coal mining, in surface landfill | spoil from hard coal mining | cut-off, U
- RoW-treatment of wastewater from PV cell production, capacity 5E9l/year | wastewater from PV cell production | cut-off, U
- RoW-heat production, at hard coal industrial furnace 1-10MW | heat, district or industrial, other than natural gas | cut-off, U
- IN-electricity production, hard coal | electricity, high voltage | cut-off, U
- RoW-flat glass production, uncoated | flat glass, uncoated | cut-off, U
- CN-hard coal mine operation | hard coal | cut-off, U
- Others

Case study: Contributions, DE (1 kWh) LCC

5 Conclusions

Conclusions:

Soca is first database allowing complete LCSA

- + fast, **efficient calculation** of social and environmental impacts and costs for several life cycle stages
- + three sustainability dimensions can be evaluated for the **same product system simultaneously**
- + clear visualizations and **comparisons of results** showing **different environmental, social and cost hotspots**

Conclusions:

- Mapping from **input/output database** to LCA database
 - **Average social risks** for all activities of same category
- **Global and RoW processes** with average social and environmental risks are **very dominant as contributions**
- **Prices are global averages** for many activities → not only distorts overall costs but also worker hours (hence social impacts)
 - Environmental and social inventory data, and especially costs should be much more **country- and process-specific**
