

Meet us, join us, and contribute to our work! Software development for sustainability, with focus on open source, at GreenDelta

At GreenDelta, we have created openLCA, the most widely used software for Life Cycle Assessments (LCAs) and related approaches today, and an ecosystem of supporting tools, and databases that are now increasingly used, worldwide, by thousands of users.

We are looking for a good, agile, versatile junior software developer (m/f/d) who wants to build with us the next big thing in sustainability and IT.

You are:

- A person with good knowledge in Java and related technologies, ideally React and web-based developments
- a curious person open for new technologies and approaches,
- interested in the environment,
- a person “who gets things done”, and is
- able to communicate in English; knowledge of German is an advantage A degree in informatics is an advantage; knowledge of server management in Linux systems is also an advantage.

We offer:

- a place in a good team with some of the leading persons in sustainability and IT “on the planet” (<https://www.greendelta.com/about-us/>)
- a really nice work atmosphere, observing the tradeoffs between structure, flexibility and agility,
- flexible working time and fair and good payment, in a permanent contract
- a nice place in a good office in Berlin, Germany
- International and national projects in research and for recognized industrial clients; e.g. starting H2020 project “infinite” to combine LCA and Building Information Modeling

You will work in projects to build new applications and IT systems, mainly web-based, that make sustainability assessments easier and yet more powerful and sophisticated, and more appealing, in research projects and for national and international clients.

If this sounds interesting to you, we'd be happy to receive your application, via email to it-sustainability@greendelta.com.

Thank you! Andreas Ciroth, Tel. +49 030 – 48 49 60 30
